## TAMESIS KERNEL: THEORETICAL FRAMEWORK

FUNDAMENTAL STRUCTURE:  $G = (V, E)$  – A discrete, evolving causal graph

MASTER EQUATION:  $H = \underbrace{\sum J_{ij} \sigma_i \cdot \sigma_j}_{\text{spin coupling}} + \underbrace{\mu \sum N_i}_{\text{node mass}} + \underbrace{\lambda \sum (k_i - k^-)^2}_{\text{connectivity}} + \underbrace{T \times S[G]}_{\text{entropy}}$

KEY INSIGHT: ALL physics emerges statistically from graph dynamics. No fundamental fields, no free parameters.
